I help teams understand how work is really flowing and improve it.

I am an Agile Coach with an engineering background and a strong interest in the technical side of delivery. I work with teams and organisations to improve flow, understand delivery data and make better decisions. I also build tools that support that work, from delivery dashboards to AI-assisted workflows.

WHAT I DO

Agile coaching & Scrum mastery	DORA and flow metrics — lead time, cycle time, throughput
Delivery predictability at scale	Change facilitation & agile transformation
Stakeholder management with senior leadership	Distributed and remote delivery
AI-assisted delivery insight & decision support	Regulated environments — insurance, banking, telecom, retail

SYSTEMS I'VE BUILT

01 / MULTI-AGENT SYSTEM

User Story Refinement Engine

Refinement is decision work, not paperwork — but teams spend hours turning vague requests into stories a developer can pick up. Five specialised agents behind an orchestrator. Input and output guardrails, three shared skills, four Jira tools scoped to least privilege, session memory plus a long-term store of every refined story. A Reflector agent scores each output; below threshold, only the failing agents re-run.

02 / DELIVERY ANALYTICS

Cross-team Metrics System

Fifty-plus teams, no shared view of how work actually flows. Leadership asked for status; the teams needed evidence. A delivery metrics system built on Azure DevOps work-item data, from company-wide rollup down to a single team: lead time, cycle time and throughput surfaced as bottlenecks and systemic risks rather than raw charts. Built and refactored with GitHub Copilot, now migrating to a lighter UI for non-technical stakeholders.

03 / ASSESSMENT TOOL

AI Readiness Assessment

Organisations ask "are we ready for AI?" and get a slide deck. They need a diagnosis they can act on. A live self-assessment that scores an organisation across capability dimensions and returns concrete next actions instead of a maturity label. Shipped and deployed, not a prototype.

JAVASCRIPT	NETLIFY

Live tool → (<https://iaassessment.netlify.app/>)

Retro Dynamics Agent

Teams default to the same Start/Stop/Continue retro every sprint. Engagement drops, and findings rarely make it past the whiteboard into a ticket.

An AI proposes a facilitation dynamic based on sprint context instead of a fixed format. Teams collaborate live on a canvas board — sticky notes, free positioning, voting — synced in real time via Liveblocks, then consolidate findings straight into Jira or Azure DevOps tickets through per-user OAuth, with no shared credentials and no server-held session state.

EXPERIENCE

2023 — PRESENT	- Led delivery improvement initiatives inside a large insurance organisation (~10,000 employees). - Designed and implemented a cross-team delivery metrics system across 50+ teams. - Analysed lead time, cycle time and throughput to surface bottlenecks and systemic risks. - Runs a monthly 1:1 coaching cycle per team, with an action backlog tracked in Azure DevOps. - Shipped AI-assisted refinement prompts for story splitting, INVEST and acceptance criteria. - Enabled leadership to make data-informed prioritisation decisions.
Capitole Consulting AGILE COACH / DELIVERY CONSULTANT	
2019 — PRESENT	- Designed and delivers an Agile change management module integrating AI and Lean Change Management, within a Project Management master’s programme. - Delivers corporate training on Agile culture, team management and AI in production environments. - Reviews student work and gives structured feedback to practitioners applying these concepts in real organisations.
IEBS Business School PROFESSOR	
2018 — 2023	- Supported teams across retail, banking and insurance. - Stabilised delivery processes, reducing rework and improving flow efficiency. - Facilitated Scrum ceremonies in distributed environments. - Analysed delivery metrics and team dynamics to drive continuous improvement. - Identified dependencies and prioritisation issues affecting delivery performance.
